

APPARATUS, METHOD AND SYSTEM FOR SCANNING
A BOUNDED SCAN AREA OF A SCANNING DEVICE

Abstract of the Disclosure

5 An apparatus and system for scanning a bounded scan area within a scanable surface of a scanning device are provided. The present invention includes a plurality of members constructed and arranged to define a scan area on a scanable surface of the scanner, a link for communicating with the control interface of the scanner, and a switch for generating a signal to the control interface to initiate and complete a scan of the bounded scan area defined by the plurality of members.

10 The scanning apparatus and system further provide a method for scanning a bounded scan area, which includes the steps of determining whether the scan area is contained entirely within the enclosed scanable surface, scanning the scanable portion of the scan area if the enclosed scan area is not contained entirely within the scanable surface, and scanning the entire scan area if the scan area is contained entirely within the scanable surface.
